

## Poylovskaya Pisanitsa. Panel 1.11

### Description

The remained part of the panel represents two images of animals turned right. Most of the panel is destroyed.

### Technical description

The panel is located at a height of 2.2 m from the ground surface on the rocky outcrops of the

Devonian sandstone. The length of the panel is 1.75 m. It is exposed to the west - southwest. The panel is damaged by the erosion processes and the crumbling of the rock crust. Most of the rock crust is lost. Petroglyphs remained partly.

The panel is in disrepair and requires urgent conservation and restoration measures.
